

Smallest Mobile Phones in the World

The saying has always been that bigger is better but that doesn't hold true when it comes to mobile phones. Despite that an increasing number of people are choosing bigger phones which offer web features and QWERTY keyboards, there remains a large market for phones that are ever-smaller in size. People don't want to carry around bulky accessories so a phone that is thin and compact is a coveted item. Because of this, handset manufacturers around the globe are competing to come up with the tiniest design while maintaining the calling features that customers desire.

Take a look at the ten smallest mobile phones that are leading this global competition today:

1. Modu Mobile

This phone is new on the market but it's already been named "The World's Lightest Phone" by The Guinness Book of World Records. It weighs just over forty grams and has dimensions that are just 72 x 37 x 7.8 mm. In other words, the Modu Mobile is miniature. However, the phone is capable of doing a wide range of different things including SMS messaging, MP3 playing and taking photographs. Some of this is done through attachments that may add bulk to its initial small size. Nevertheless, even with attachments, this phone is setting the benchmark for small cell phones across the globe. It isn't on sale yet but will be in certain markets by the end of the year so those of you who want to be on the cutting edge should start thinking now about getting your fingers on this phone.

2. Haier Elegance

Before the Modu Mobile came into the market, the phone that was dubbed “world’s smallest” was the Haier Elegance. It markets itself as being the size of a lipstick case while offering all of the features of a full-size phone. Weighing 64 grams and measuring 9.1 x 3.5 x 1.8 cm, it remains one of the smallest phones available today. The tagline it goes by these days is “the world’s smallest unlocked GSM mobile phone”.

3. NEC N930

One of the smallest phones on the mainstream market is the NEC N930. It’s bulky compared to the Modu Mobile but remains small at 85.5 x 54 x 11.9 mm in size. Weighing 72 grams, the phone can has all standard phone features including SMS, games and a camera. It is also Bluetooth-enabled. The main reason that this one has done so well in the market isn’t just its size, though; it’s the fact that it’s considered a sleek, attractive phone that is hip to have in your hand.

4. Xun Chi 138

Weighing in at only 55 grams, the Xun Chi 138 is a close competitor to the Modu Mobile in terms of being lightweight. It uses a touch screen with handwriting recognition to avoid requiring a keypad, a feature that many of these small phones are starting to implement. This one's available in China where it can barely be seen in the palms of its owners because of its small size.

5. Cellwatch M500 Watch Phone

Why bother carrying around a tiny phone in the palm of your hand when you can strap one onto your wrist instead? One of the favourite small cell phones on the market today is the M500 watch which looks and functions just like a wristwatch but also has all of the calling features of a modern mobile phone. Because of its design, it only appeals to a certain niche market of shoppers but has got attention for being different than everything else that's out there.

6. Samsung SGH-E888

Although it weighs more than twice what the Modu Mobile weighs, this phone by Samsung is one that many are still calling the smallest in the world. That's because it's one of the ones that is most frequently seen in use in different parts of the globe. Measuring 87 x 47 x 23 mm, its features include a swiveled camera and 80 MB of memory.

7. UTStarcom Slice

This one measures a bit bigger than the other small cell phones on the market (109 x 46 x 10.2 mm). However, it makes the cut because of its light weight which is just about 65 grams and competes with many of the more compact phones that are being sold today. This phone is considered fairly simple and is not designed for the sophisticated cell phone user but will meet the needs of the person who wants a lightweight phone to carry around for basic calling purposes.

8. LG Migo

People who like LG phones will find that this is the smallest one that they can wrap their hands around. It weighs in at just under 70 grams and offers basic text messaging and calling features. In the big spectrum of small cell phones, it doesn't stand out. However, it's an affordable option for the low-end phone buyer who wants to think small.

9. Pantech C300

This one was originally called “the world’s smallest flip phone” and remains a trendsetter in that part of the market today. It weighs a little heavier than 70 grams and measures 3.4 x 1.7 x 0.8 in. It has all of the features of a modern cell phone and is available in an affordable price range.

However, it tends to receive mediocre reviews in terms of quality which some say is what you sacrifice in exchange for the small size.

10. Firefly Mobile

This phone is designed for kids and its design is definitely kid-sized. The features that it focuses on are those preferred by teens and tweens around the world so it doesn't offer the features that adults might want. However, it does serve a certain niche in the market. It weighs just over 60 grams and can easily be carried around by kids of any age. For youngsters that are looking to be trendsetters, this is the phone that's currently favored.

And Finally

Here is size of future mobile phones 😊

10 majorly mini mobile phones

The Xun Chi 138 may be the world's smallest mobile phone at 67mm long. It supposedly has a 1.3 "mega pixls" camera capable of shooting

both stills and video.

As major smartphone manufacturers trend toward the 5-inch format seen in the new Samsung Galaxy S4, Sony Xperia Z and more, some other mobile phone makers are thinking on a smaller scale.

Technology website Tech Info 2 recently shared a list of some of the world's tiniest cell phones for children, but, really, anyone looking to downsize their mobile could try one of these itty-bitty devices. We can only vouch for the cuteness of these phones -- the camera specs of most match their miniature scale, but as we know, the photographer is far more important than the number of megapixels.

The Modu T may be the best of the small smartphone stature bunch in terms of capture capabilities with a 5-megapixel camera and LED flash. The device measures 75 x 46.5 x 11mm.

The Cellwatch M500 may satisfy your James Bond fantasies by squeezing a plethora of tech into the size of a standard wrist watch. Its 2-megapixel camera would let you shoot stills and video on the sly.

Billed as the world's smallest slider phone, the Samsung SGH-E888 offers a 1.3-megapixel camera that can rotate 180 degrees and includes a flash.
